

Important HTTP Status Codes

What is HTTP Status Codes ?

Status codes are issued by a server in response to a client's request made to the server.

The first digit of the status code specifies one of five standard classes of responses.

swipe →

Standard Classes

- **1xx – Informational**
- **2xx – Success**
- **3xx – Redirection**
- **4xx – Client Error**
- **5xx – Server Error**

1xx – Informational

It indicates that the request was received & understood by the server and its continuing the process.

- **100 – Continue**
- **101 – Switching Protocols**
- **102 – Processing (WebDAV)**
- **103 – Early Hints**

2xx – Success

It indicates the action requested by the client was received, understood, and accepted.

- **200 – OK**
- **201 – Created**
- **202 – Accepted**
- **204 – No Content**

3xx – Redirection

Many of these 3xx status codes are used in URL redirection or it indicates the client must take additional action to complete the request.

- **301 – Moved Permanently**
- **302 – Found**
- **304 – Not Modified**
- **305 – Use Proxy**

4xx – Client Error

This status code is intended for situations in which the error seems to have been caused by the client.

- **400 – Bad Request**
- **401 – Unauthorized**
- **403 – Forbidden**
- **404 – Not Found**

5xx – Server Error

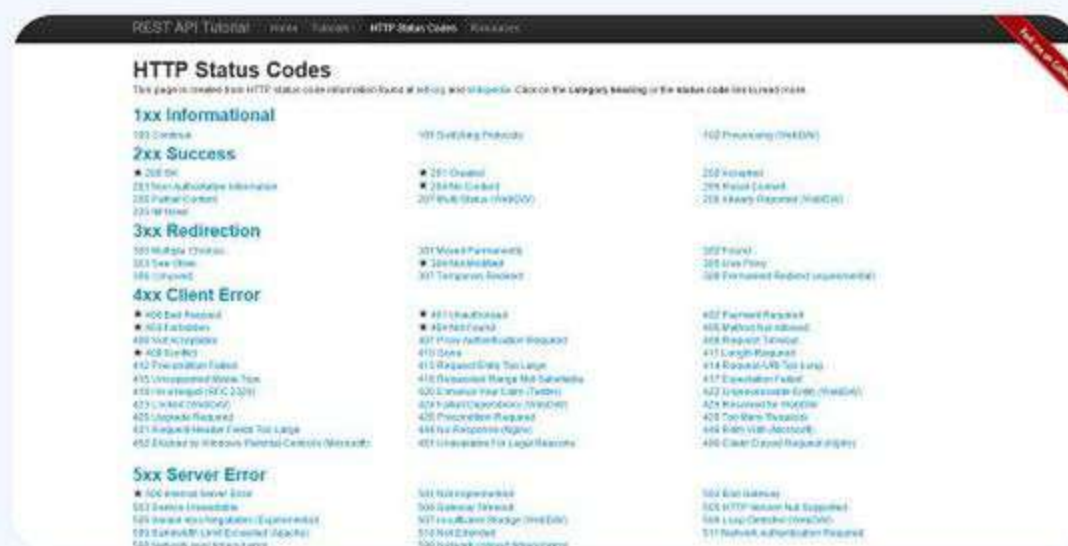

It indicates that the server has encountered a situation where it doesn't know how to handle a request.

- **500 – Internal Server Error**
- **501 – Not Implemented**
- **502 – Bad Gateway**
- **504 – Gateway Timeout**

These were not all the status codes that exists, there are many more codes that indicates different things.
