WHAT IS

SCRUM

Lets say you want to build a
Social Media app

in agile method

But how?

where to
start?

better
communication

quicker
development?

feedback?

transparency?

Scrum is one of the frameworks
that helps teams work together

Scrum won't help you build a better product, but
it might help you build a better team. That in turn
leads to a better product

Life Cycle of Scrum

The Product Owner creates and prioritizes a list of wish-list items called the **product backlog**
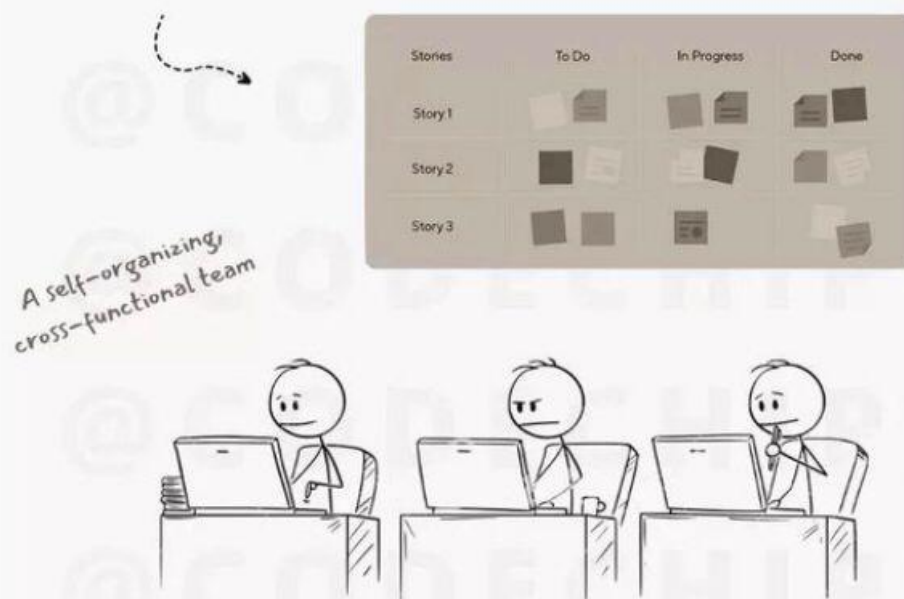

Through the **Sprint Planning Meeting**, the Scrum Team decides how many items from the backlog can be developed in a Sprint
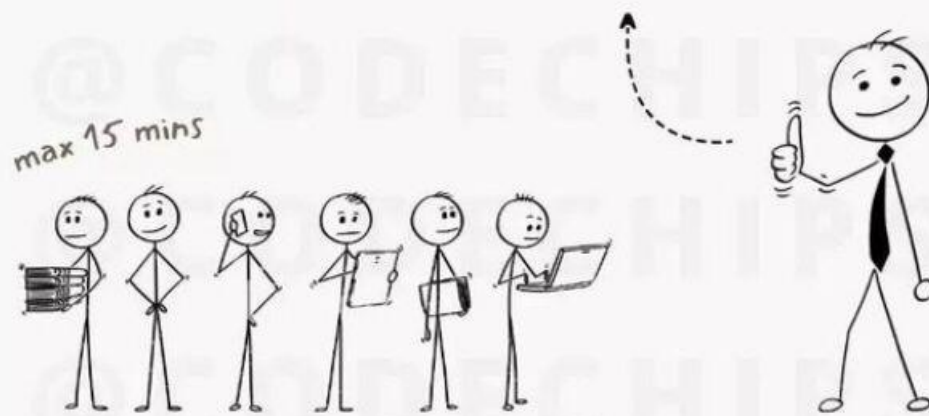

A Sprint is a **1 - 4 week** time block where the tasks committed in the Sprint backlog is developed

A Scrum board is a visual status of your sprint, showing your work split across different stages of your workflow.

Stories	To Do	In Progress	Done
Story 1			
Story 2			
Story 3			

A self-organizing, cross-functional team

Every day of the Sprint, the team get together &
do a stand-up called the **Daily Scrum Meeting**

During the Sprint, Scrum Master tries
to remove any impediments and blockers
so the Scrum Team can continue to work

max 15 mins

At the end of the Sprint, they showcase the potentially shippable features to the team and other stakeholders

At the end of the Sprint, there is
also a Sprint Review at the Retrospective Meeting.

And the process is repeated till the product is complete

Product Backlog   Sprint Planning , Backlog   Sprint   Potentially Shippable product

Sprint Review , Retrospective
