Eclipse IDE Shortcuts

accelerates the daily development

Ctrl+1: Provides quick-fix for errors and warnings, depending on the cursor location.

Ctrl+Shift+O: Organize imports - automatically add, remove, and suggest import statements if missing, unused or multiple imports are available.

Ctrl+Space: Code assitence and completion.

Ctrl+D: Deletes current line.

Alt+Up or Alt+Down arrow: Moves current line up or down.

Ctrl+Alt+Up or Ctrl+Alt+Down arrow: Creates a copy of the current line up or down.

Ctrl+I: Corrects the code indentation - format tabs/whitespaces in code

Ctrl+F11: Runs the currently opened java class if the main method exists or else runs the last launched application

Ctrl+F6: Switch between opened files in the editor.

* I prefer to overwrite it with Ctrl+Tab - like we switch tabs in the browser.

I hope this eases your development journey.
